Group 43: Meeting 5

Opening at: 15:07   Chair: Merel

Present: Everyone except Nivard and Kristin   Secretary: Sem

We picked a name for the project: '**Greenify**'

What we did last week:

Mika: Worked on the GUI and getting the CI to work. Applying the things the TA said should help a lot.

Daan: worked on the checkstyle. Also worked on server and JPA but didn't quite get it working yet

Sem: Worked on the GUI and getting the gradle configuration working.

Ceren: made progress on the server and made some updates to the GUI. Also made tests for the Client and Server side. Worked on the Code Coverage

Merel: did a lot of research on releases (tag is enough). Also looked up some scores about CO_2 (how much co2 you save with certain actions). Found sources for hints to include.

We cleaned the repository, and fixed the project structure.

We still need to add badges to the GUI

For next week:

We made a lot of progress on the research and now have a pretty good understanding of how to work on the project.

Work on implementing eating a vegetarian meal

Work on implementing more tests

We divided the tasks for the demo next week

Answers from the TA:

We don't need to use an API for the calculation of the CO_2 footprint

We need to Install jfx image to get the javafx working with gradle. TA sent a link for this in mattermost

We will meet again after the midterm on Thursday.
